

K.V.N. RAJASEKHAR

+91 63004 13643 • Hyderabad, India • kanagalavnrajasekhar@gmail.com

Portfolio: vnrjasekhar.dev • LinkedIn: linkedin.com/in/kvnrs23 • GitHub: github.com/kvnrajasekhar

PROFESSIONAL SUMMARY

Software Engineer with enterprise experience at Cognizant, contributing to financial data synchronization, and Node.js backend development for a financial application. Experienced in working with senior engineers, DBAs, BAs, and QA to improve Oracle SQL performance, support schema updates, and help deliver backend API changes for client-facing systems. Proficient in **MERN stack** (MongoDB, Express.js, React, Node.js) with hands-on experience in RESTful API design, middleware architecture, and modern web technologies.

TECHNICAL SKILLS

- **Programming:** JavaScript (ES6+), Java, Python
- **Web & Backend:** HTML5, CSS3, Node.js, Express.js, RESTful API design, JWT authentication, OAuth 2.0
- **Frameworks & Libraries:** React.js (Hooks, Context API), Spring Boot, Tailwind CSS, Framer Motion
- **Databases & Data:** SQL, SQL Server, MongoDB, Mongoose (schema design, indexing)
- **DSA & Problem Solving:** 230+ LeetCode & GeeksforGeeks-style problems solved, daily DSA practice
- **Tools & DevOps:** Git/GitHub, Docker (Basics), Postman, VS Code, Vercel, AWS (Developer Associate in progress)
- **Testing:** JUnit, API validation with Postman
- **Soft Skills:** Cross-functional Collaboration • Problem-solving • Adaptability • Technical Communication

PROFESSIONAL EXPERIENCE

Software Engineer Trainee - Cognizant Technology Solutions

Sep 2025 – Present | Hyderabad, India

- Partnered with senior engineers on a data synchronization and staging layer that transformed and streamed financial datasets from backend systems to BI platforms.
- Improved Oracle SQL query performance with the database team to enhance dashboard speed and data accuracy for client-facing reporting.
- Coordinated with Business Analysts and QA in **Scrum ceremonies** to debug data discrepancies, deploy schema updates, and keep reporting flows stable.
- Supported backend development of a new **Node.js** API version for a financial application, contributing to service logic and integration updates.
- Worked with senior engineers and QA to troubleshoot issues, validate functionality, and align backend delivery with business requirements

Programmer Analyst Intern - Cognizant Technology Solutions

Feb 2025 – Aug 2025 | Chennai, India

- Built a production-ready Food Ordering Management Platform using SpringBoot, JPA, and PostgreSQL following a 3-tier architecture (presentation, business logic, data access).
- Developed 15+ RESTful APIs with JWT authentication, role-based access control, and security measures (input validation, CORS configuration).
- Containerized the application using Docker and deployed it on **Render Cloud** with environment-based configuration management, gaining hands-on exposure to deployment workflows.
- Completed training in enterprise Java development, **JUnit testing fundamentals**, Agile/Scrum, and deployment workflows, earning conversion to full-time based on performance.

PERSONAL PROJECTS

Qotes - Quote sharing social media application

Links: <https://github.com/kvnrajasekhar/qotes-server>

Technologies: Node.js, Express.js, MongoDB, Mongoose, Redis, Apache Kafka, JWT, RESTful APIs, Winston logger

- Developing the backend for Qotes, a quote-sharing social media application, using Node.js and Express.js to support JWT authentication, quote CRUD, user profiles, likes, shares, comments, and feed generation for concurrent users.
- Designed MongoDB schemas with **Mongoose**, including virtual properties, pre-save hooks for password hashing, and population for nested references; optimized queries with indexes and aggregation pipelines to support feed generation.
- Integrated **Apache Kafka** for event-driven background processing and **Redis** for caching to improve backend responsiveness and scalability.
- Built a modular middleware layer with auth guards, error handling, request validation, and rate limiting; defined API contracts and validated responses using Postman for core business logic.

QuickFix - Multilingual Service Platform

Links: <https://quickfix-rho.vercel.app/> | <https://github.com/kvnrajasekhar/quickfix>

Technologies: React.js (Hooks, Context API), Tailwind CSS, Material-UI, Framer Motion, i18next, Vercel

- Built a multilingual React.js app using Hooks and **Context API** for state management, with real-time language switching (English, Telugu, Hindi) through i18next.
- Designed responsive, accessible UI using Tailwind CSS and Material-UI, with Framer Motion for smooth transitions and micro-interactions, tested across 5+ device sizes.
- Architected Context-based state management for user preferences (language), authentication, and service-booking flow, with custom hooks (useLanguage, useAuth) to reduce prop drilling.
- Managed component lifecycle via useEffect for data fetching, event listeners, and side effects; deployed to Vercel with environment-based config, and optimized builds using code splitting.

EDUCATION

Bachelor of Technology in Computer Science and Engineering (IoT)

R.V.R. & J.C. College of Engineering, Guntur • CGPA: 9.22/10.0 • 2021 – 2025

CERTIFICATIONS & COURSES

- AWS Certified Developer Associate – In Progress (Expected: July 2026)
- The Complete Web Development Bootcamp – Udemy

ACHIEVEMENTS & HACKATHONS

- Hacksday National Hackathon **Finalist** - Selected among top 15 finalists from 1,400+ teams in 48-hour national competition at SMVEC, Pondicherry.
- Hackmela Hackathon - **2nd place** in 24-hour centralized technical challenge at KITS College of Engineering.
- **Rank 3**, CodeByte Competitive Programming Contest, R.V.R. & J.C. College of Engineering.
- **Best Cadet 2024**, 1 (A) ENGR COY NCC, Guntur Group, Andhra Pradesh & Telangana Directorate.
