# K.V.N. RAJASEKHAR

+91 63004 13643 • Guntur, AP, India • kanagalavnrajasekhar@gmail.com
Portfolio: raja-eta.vercel.app • LinkedIn: linkedin.com/in/kvnrs23 • GitHub: github.com/kvnrajasekhar

## PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 1 year of enterprise experience building scalable applications across Java and .NET ecosystems. Currently contributing to financial services systems at Cognizant using C#, ASP.NET MVC, and Oracle/SQL Server databases. Proficient in RESTful API design, JWT authentication, database performance tuning, and cloud deployment (Render, Vercel). Demonstrated ability to rapidly learn new technology stacks and deliver production-ready solutions across full software development lifecycle.

## TECHNICAL SKILLS

- **Programming:** JavaScript (ES6+), C#, Java, Python
- **Frameworks & Libraries:** React.js (Hooks, Context API), ASP.NET MVC, Spring Boot, Material-UI, Bootstrap, Tailwind CSS, Framer Motion
- **Web & Backend:** HTML5, CSS3, Node.js, Express.js, RESTful API design, Middleware architecture, JWT authentication
- **Databases:** SQL Server, Oracle, PL/SQL, MongoDB, Mongoose (schema design, indexing)
- **Tools & DevOps:** Git/GitHub, Postman, VS Code, Docker, GitHub Actions, Vercel, Render, AWS (Developer Associate in progress)

**Soft Skills:** Cross-functional Collaboration • Problem-solving • Adaptability • Technical Communication

## PROFESSIONAL EXPERIENCE

### Software Engineer Trainee - Cognizant Technology Solutions

*Sep 2025 – Present | Hyderabad, India*

- Enhance and maintain full-stack enterprise applications for international financial services clients using C#, ASP.NET MVC, SQL Server, and Oracle databases, implementing RESTful APIs and backend business logic serving 100K+ daily transactions.
- Design and optimize database schemas and queries in SQL Server and PL/SQL, reducing query execution time by 35% through indexing strategies, stored procedure optimization, and data model refinement.
- Implement secure authentication and authorization mechanisms following OAuth and JWT principles, ensuring compliance with financial domain standards and maintaining data integrity across high-volume transaction processing systems.
- Collaborate with cross-functional teams (business analysts, QA engineers, frontend developers) in Agile sprints to deliver feature enhancements, perform code reviews, debug production issues, and deploy updates with 99.5% uptime.

### Programmer Analyst Trainee - Cognizant Technology Solutions

*Feb 2025 – Aug 2025 | Chennai, India*

- **Architected and led implementation of production-ready Food Ordering Management Platform** using 3-tier design pattern (presentation, business logic, data access) with Spring Boot, JPA, and PostgreSQL database, demonstrating full-stack development capabilities across Java ecosystem.
- **Engineered secure REST API ecosystem with 15+ endpoints** implementing JWT stateless authentication, role-based authorization, and comprehensive security controls (XSS prevention, CORS configuration, input validation).
- **Containerized full application stack using Docker**; orchestrated deployment to Render Cloud platform with environment-based configuration management.
- Completed intensive training program in enterprise software development practices, agile methodologies, and production deployment workflows, achieving conversion to full-time Software Engineer role based on technical performance and project delivery.

## PERSONAL PROJECTS

### QuickFix - Multilingual Service Platform

*Technologies:* React.js (Hooks, Context API), Tailwind CSS, Material-UI, Framer Motion, i18next, Vercel

- Built multilingual React.js application using Hooks (useState, useEffect, useContext) and Context API for state management, implementing real-time language switching (English, Telugu, Hindi) with i18next library serving localized content to diverse user demographics.
- Designed responsive, accessible UI with Tailwind CSS utility-first framework and Material-UI component library; integrated Framer Motion for smooth page transitions and micro-interactions, achieving mobile-first design tested across 5+ device sizes.
- Architected React Context API-based state management handling user preferences (language), authentication state, and service booking flow across application; implemented custom hooks (useLanguage, useAuth) for reusable logic reducing prop drilling.
- Managed component lifecycle with useEffect for data fetching, event listener setup/cleanup, and side effect handling; deployed to Vercel with continuous deployment from GitHub implementing environment-based configuration and optimized production builds with code splitting.

### Qotes-server - Quote Sharing Social Media Backend

*Technologies:* Node.js, Express.js, MongoDB, Mongoose, Redis, Apache Kafka, JWT, RESTful APIs

- Developed scalable RESTful backend using Node.js and Express.js supporting user authentication (JWT), quote CRUD operations, user profiles, social interactions (likes, shares, comments), and real-time feed generation for concurrent users.
- Designed MongoDB schema with Mongoose ORM implementing data models virtual properties, pre-save hooks for password hashing, and population for nested references; optimized query performance using indexes on frequently accessed fields and aggregation pipelines for feed generation.
- Integrated Apache Kafka for event-driven architecture processing background tasks asynchronously, reducing API response times by 40% through non-blocking operations and Redis caching layer.
- Built modular middleware architecture with authentication guards, error handling, request validation, rate limiting; implemented environment-specific configurations (development, staging, production) with secure credential management and designed API contracts supporting future frontend integration and Validate API responses using Postman for critical business logic.

## EDUCATION

**Bachelor of Technology in Computer Science and Engineering (IoT)**

R.V.R. & J.C. College of Engineering, Guntur • CGPA: 9.22/10.0 • 2021 - 2025

## CERTIFICATIONS & COURSES

- AWS Certified Developer Associate – In Progress (Expected: March 2026)
- The Complete Web Development Bootcamp – Udemy
- API Fundamentals Student Expert – Postman
- Introduction to DevOps – IBM (Coursera)
- Git for Beginners – Kode Kloud

## ACHIEVEMENTS & HACKATHONS

- Hacksday National Hackathon Finalist - Selected among top 15 finalists from 1,400+ teams in 48-hour national competition at SMVEC, Pondicherry.
- Hackmela Hackathon - 2nd place in 24-hour centralized technical challenge at KITS College of Engineering.
- Rank 3, CodeByte Competitive Programming Contest, R.V.R. & J.C. College of Engineering.
- Best Cadet 2024, 1 (A) ENGR COY NCC, Guntur Group, Andhra Pradesh & Telangana Directorate.
