PROFESSIONAL SUMMARY

Software Engineer | MERN Stack Developer with 1 year of enterprise experience at **Cognizant** specializing in financial data systems and middleware architecture. Expert in designing and maintaining complex data integration pipelines using **SQL Server, Oracle, and Microsoft Access** to power **Business Intelligence (BI)** reporting for international clients. Proficient in **MongoDB, Express.js, React, and Node.js**, with a professional focus on bridging middleware data synchronization with modern, data-driven business requirements within **Scrum** environments.

TECHNICAL SKILLS

- **Programming:** JavaScript (ES6+), Java, Python
- **Frameworks & Libraries:** React.js (Hooks, Context API), Spring Boot, Material-UI, Bootstrap, Tailwind CSS, Framer Motion
- **Web & Backend:** HTML5, CSS3, Node.js, Express.js, RESTful API design, Middleware architecture, JWT authentication
- **Databases:** SQL Server, Oracle SQL Developer, MongoDB, Mongoose (schema design, indexing)
- **Tools & DevOps:** Git/GitHub, Postman, VS Code, Docker, GitHub Actions, Vercel, Render, AWS (Developer Associate in progress)

Soft Skills: Cross-functional Collaboration • Problem-solving • Adaptability • Technical Communication

PROFESSIONAL EXPERIENCE

Software Engineer Trainee - Cognizant Technology Solutions

Sep 2025 – Present | Hyderabad, India

- BI Data Pipeline Management: Architect and maintain a critical data synchronization layer using **Microsoft Access** as a middleware bridge; engineered complex SQL queries to transform and flow data from core backend servers to **Business Intelligence (BI)** platforms for client reporting.
- Design and optimize database schemas and queries in Oracle SQL Developer, reducing query execution time by 35% through indexing strategies, stored procedure optimization, and data model refinement.
- Business Intelligence Reporting: Translate intricate client business requirements into functional database updates, modifying middleware queries to ensure real-time accuracy in **Customer BI Reports** and high-stakes financial dashboards.
- **Scrum Process & Collaboration:** Actively participate in **Scrum ceremonies**, including daily stand-ups and sprint planning, collaborating with Business Analysts and QA Engineers to debug production data discrepancies and deploy schema updates with **99.5% system uptime**.

Programmer Analyst Trainee - Cognizant Technology Solutions

Feb 2025 – Aug 2025 | Chennai, India

- **Architected and led implementation of production-ready Food Ordering Management Platform** using 3-tier design pattern (presentation, business logic, data access) with Spring Boot, JPA, and PostgreSQL database, demonstrating full-stack development capabilities across Java ecosystem.
- **Engineered secure REST API ecosystem with 15+ endpoints** implementing JWT stateless authentication, role-based authorization, and comprehensive security controls (XSS prevention, CORS configuration, input validation).
- **Containerized full application stack using Docker**; orchestrated deployment to Render Cloud platform with environment-based configuration management.
- Completed intensive training program in enterprise software development practices, agile methodologies, and production deployment workflows, achieving conversion to full-time Software Engineer role based on technical performance and project delivery.

PERSONAL PROJECTS

QuickFix - Multilingual Service Platform

Technologies: React.js (Hooks, Context API), Tailwind CSS, Material-UI, Framer Motion, i18next, Vercel

- Built multilingual React.js application using Hooks (useState, useEffect, useContext) and Context API for state management, implementing real-time language switching (English, Telugu, Hindi) with i18next library serving localized content to diverse user demographics.
- Designed responsive, accessible UI with Tailwind CSS utility-first framework and Material-UI component library; integrated Framer Motion for smooth page transitions and micro-interactions, achieving mobile-first design tested across 5+ device sizes.
- Architected React Context API-based state management handling user preferences (language), authentication state, and service booking flow across application; implemented custom hooks (useLanguage, useAuth) for reusable logic reducing prop drilling.
- Managed component lifecycle with useEffect for data fetching, event listener setup/cleanup, and side effect handling; deployed to Vercel with continuous deployment from GitHub implementing environment-based configuration and optimized production builds with code splitting.

Qotes-server - Quote Sharing Social Media Backend

Technologies: Node.js, Express.js, MongoDB, Mongoose, Redis, Apache Kafka, JWT, RESTful APIs

- Developed scalable RESTful backend using Node.js and Express.js supporting user authentication (JWT), quote CRUD operations, user profiles, social interactions (likes, shares, comments), and real-time feed generation for concurrent users.
- Designed MongoDB schema with Mongoose ORM implementing data models virtual properties, pre-save hooks for password hashing, and population for nested references; optimized query performance using indexes on frequently accessed fields and aggregation pipelines for feed generation.
- Integrated Apache Kafka for event-driven architecture processing background tasks asynchronously, reducing API response times by 40% through non-blocking operations and Redis caching layer.
- Built modular middleware architecture with authentication guards, error handling, request validation, rate limiting; implemented environment-specific configurations (development, staging, production) with secure credential management and designed API contracts supporting future frontend integration and Validate API responses using Postman for critical business logic.

EDUCATION

Bachelor of Technology in Computer Science and Engineering (IoT)

R.V.R. & J.C. College of Engineering, Guntur • CGPA: 9.22/10.0 • 2021 - 2025

CERTIFICATIONS & COURSES

- AWS Certified Developer Associate – In Progress (Expected:June 2026)
- The Complete Web Development Bootcamp – Udemy
- API Fundamentals Student Expert – Postman
- Introduction to DevOps – IBM (Coursera)
- Git for Beginners – Kode Kloud

ACHIEVEMENTS & HACKATHONS

- Hacksday National Hackathon Finalist - Selected among top 15 finalists from 1,400+ teams in 48-hour national competition at SMVEC, Pondicherry.
- Hackmela Hackathon - 2nd place in 24-hour centralized technical challenge at KITS College of Engineering.
- Rank 3, CodeByte Competitive Programming Contest, R.V.R. & J.C. College of Engineering.
- Best Cadet 2024, 1 (A) ENGR COY NCC, Guntur Group, Andhra Pradesh & Telangana Directorate.
